**Module Name**: Black Box, White Box,INtegration & System Testing
**Test Case ID**:T08_01
**Environment:**OS:Windows 11, Browser:Chrome ,Website:https://www.amazon.in/

# 1. Objective

To practice organizing test cases in TestLink, executing tests, logging a confirmed defect in Bugzilla, assigning severity and priority, and retesting the defect.

# 2. Tools and application

- Application under test: Amazon.in (use only normal browsing/search/cart behavior; do not place a real order).
- Test management: TestLink.
- Defect tracking: Bugzilla.
- Test cases: TC01–TC06; matching spreadsheet is provided separately.

# 3. Important evidence note

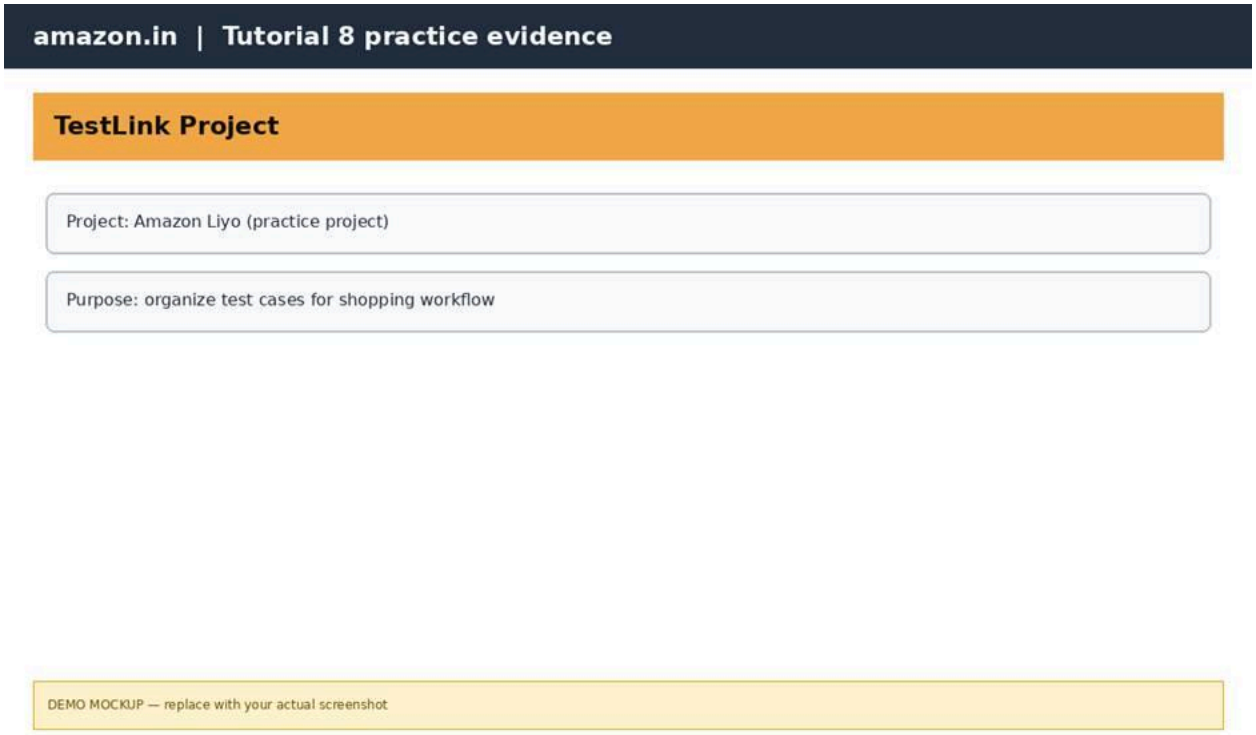

**The images included below are clearly labelled demo mockups, not screenshots captured from a live Amazon/TestLink/Bugzilla session.** Replace each mockup with your own actual screenshot after performing the steps in the relevant application. Do not report a defect unless you observe it.

# 4. Test execution report

## TC01 — Verify project can be created in TestLink

| | |
|---|---|
| **Test Case** | Verify project can be created in TestLink |
| **Expected Result** | Project is created and visible |
| **Actual Result** | Not executed |
| **Status** | Not Run |
| **Defect ID** | N/A until an actual defect is confirmed |
| **Execution note** | Create project in TestLink and capture the project page. |

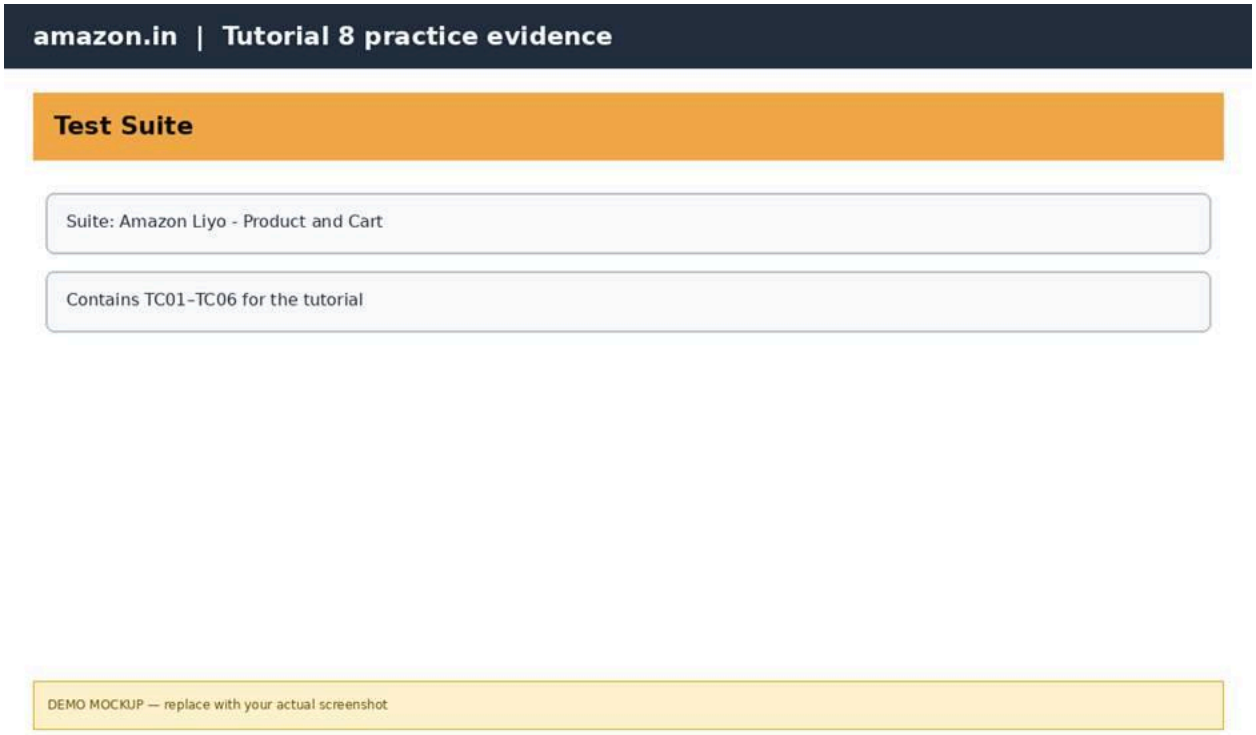

Screenshot evidence (demo mockup — replace with actual screenshot):

# TC02 — Verify a test suite can be created

| | |
|---|---|
| **Test Case** | Verify a test suite can be created |
| **Expected Result** | Suite appears under project |
| **Actual Result** | Not executed |
| **Status** | Not Run |
| **Defect ID** | N/A until an actual defect is confirmed |
| **Execution note** | Create the suite and capture it under the project. |

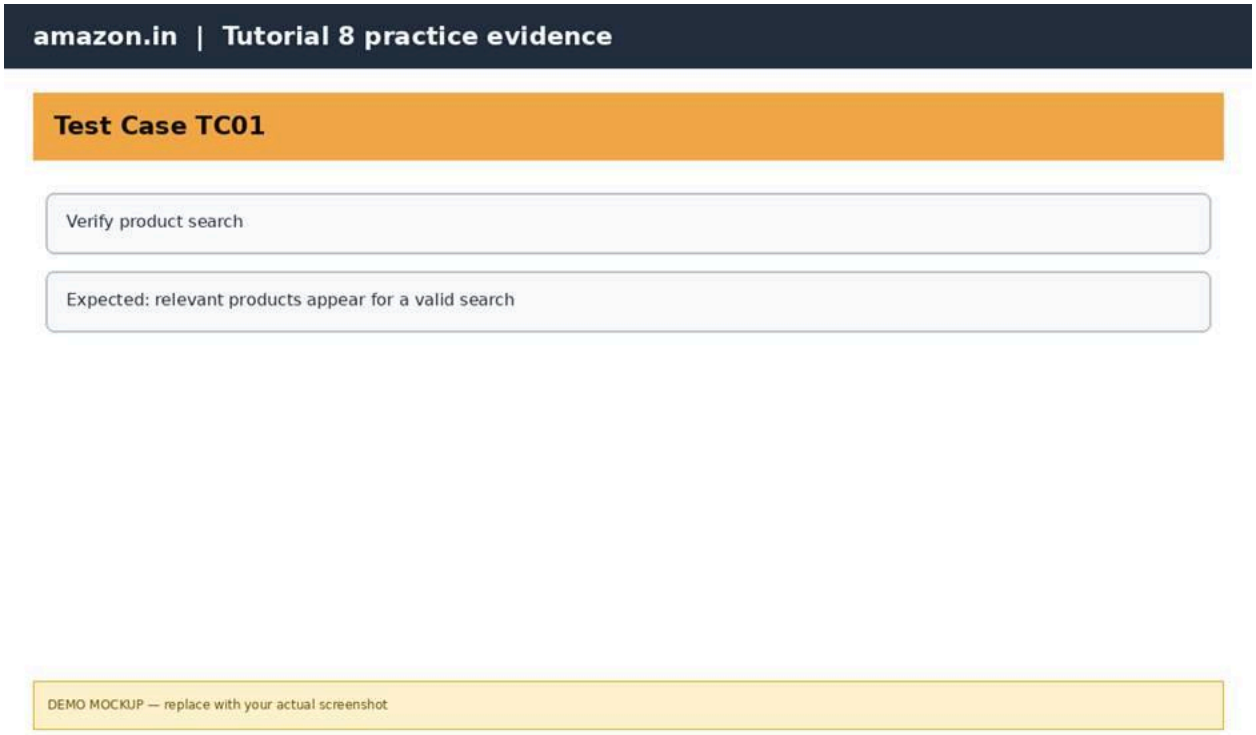

Screenshot evidence (demo mockup — replace with actual screenshot):

# TC03 — Create a product-search test case

| | |
|---|---|
| **Test Case** | Create a product-search test case |
| **Expected Result** | Test case is saved with steps and expected result |
| **Actual Result** | Not executed |
| **Status** | Not Run |
| **Defect ID** | N/A until an actual defect is confirmed |
| **Execution note** | Create a test case for searching a product on Amazon.in and capture its details. |

Screenshot evidence (demo mockup — replace with actual screenshot):

# TC04 — Execute a test case and mark Pass

| | |
|---|---|
| **Test Case** | Execute a test case and mark Pass |
| **Expected Result** | Actual result matches expected result and status is Pass |
| **Actual Result** | Not executed |
| **Status** | Not Run |
| **Defect ID** | N/A until an actual defect is confirmed |
| **Execution note** | Run the test; mark Pass only when observed behavior matches the expected result. |

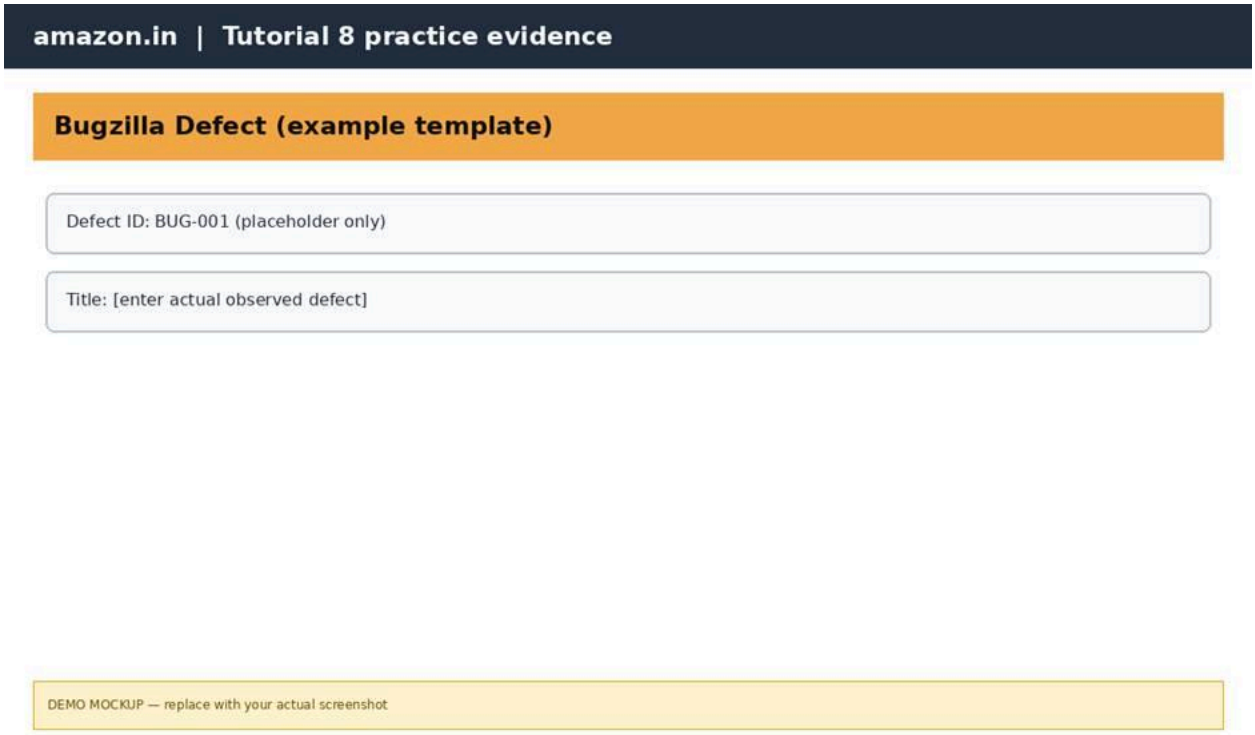

Screenshot evidence (demo mockup — replace with actual screenshot):

# TC05 — Create a defect for a confirmed failure

| | |
|---|---|
| **Test Case** | Create a defect for a confirmed failure |
| **Expected Result** | Defect is saved with a unique ID |
| **Actual Result** | Not executed |
| **Status** | Not Run |
| **Defect ID** | N/A until an actual defect is confirmed |
| **Execution note** | Only if a reproducible failure is observed, log it in Bugzilla and capture the real defect. |

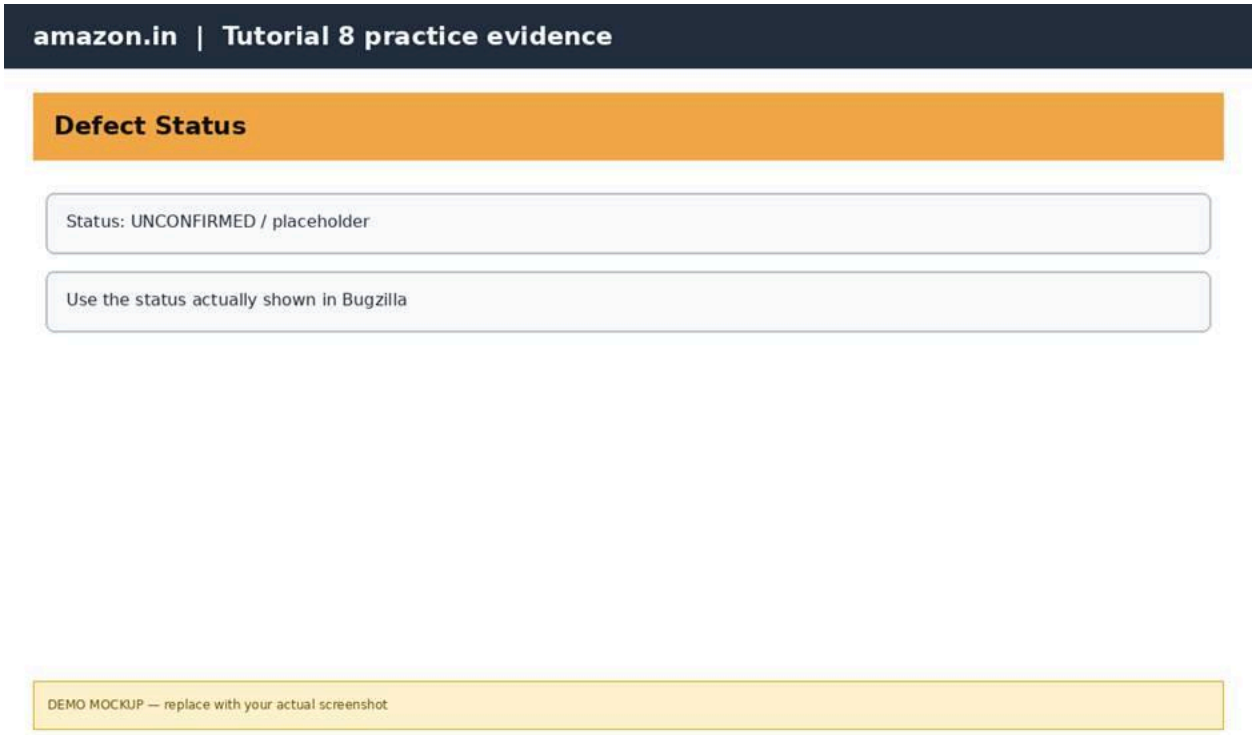

Screenshot evidence (demo mockup — replace with actual screenshot):

# TC06 — Retest defect and record final status

| | |
|---|---|
| **Test Case** | Retest defect and record final status |
| **Expected Result** | Retest outcome and defect status reflect actual behavior |
| **Actual Result** | Not executed |
| **Status** | Not Run |
| **Defect ID** | N/A until an actual defect is confirmed |
| **Execution note** | After a fix is available, repeat the steps and update the real status. |

Screenshot evidence (demo mockup — replace with actual screenshot):

# 5. Final execution summary

| | |
|---|---|
| Total test cases | 6 |
| Passed | Fill after execution |
| Failed | Fill after execution |
| Blocked | Fill after execution |
| Not run | 6 until execution is completed |
| Pass percentage | (Passed ÷ executed test cases) × 100% |

# 6. Conclusion

This practical covers the basic workflow of TestLink test management and Bugzilla defect tracking. Complete the real execution, replace all demo mockups with genuine screenshots, and update Actual Result, Status, Defect ID, and the final summary before submission.

Suggested screenshots to capture: TestLink project, test suite, test case details, test execution result, actual Bugzilla defect (only if found), defect status, and final execution summary.
